

TECHNICAL BULLETIN

SUBJECT: ENCORE ROUTED GROOVES

TECHNICAL BULLETIN ID: E061914-01

DATE: 10/1/19

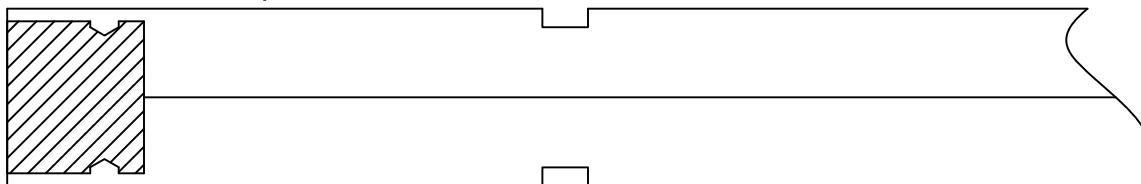

We have a lot of flexibility with Encore. Over the years we have had several requests for different types of grooves. To improve the communication please use the one of the following when requesting drawings, quotes or ordering. All grooves are available in 1-3/4" thickness, either vertical or horizontal. All grooves are available in 1-3/8" thickness doors with some limitations on the Standard V-groove and Square groove. Both solid and foam core doors are available.

1-3/4" ENCORE - STANDARD V-GROOVE

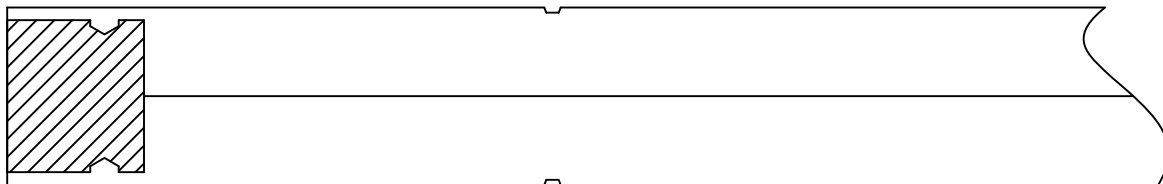

This is our standard v-groove. The size is 1/4" wide at the face and 3/32" deep. This is the only v-groove profile size we offer.

1-3/4" ENCORE - SQUARE GROOVE

This is our NEW "Square Groove". The size can be customized but has limitations of 1/4" minimum width at the face and 3/16" maximum depth.

1-3/4" ENCORE - WEST GROOVE

Our NEW "West Groove" matches Masonites "West End Series". It is a very small groove with a slight angled side. Size is 5/32" wide by 1/16" deep.
